

INNOVATIVE and AUSTRALIAN

DSMA CLEAR

DSMA CLEAR

Selective grassweed control in turfgrass situations.

DSMA is a common herbicide used throughout Australia for grassweed control in turfgrass situations. DSMA CLEAR is a clear aqueous solution, which means no mixing, no blocked nozzles no missed strips in the spray pattern and no risk of powder inhalation which means greater operator safety.

PROVEN PERFORMANCE:

Over many years DSMA has proven an effective, reliable selective weed killer. Arguably the most widely used herbicide on couch, it controls difficult and unsightly grass weeds in recreational and sporting turf. Professional Turf Managers have learned to rely on DSMA in their battle with hard to control grasses such as Paspalum, Summergrass, Mullumbimby Couch, Crab grass, Sedges and the dreaded Nut grass.

NEW TECHNOLOGY:

DSMA formulations have been getting better, and more user-friendly. Now Barmac **DSMA CLEAR** takes a quantum leap forward over suspended concentrate DSMA formulations as it is a clear aqueous free flowing solution, with its own in-built wetting agent.

Clearly Quicker

DSMA CLEAR is a true solution so there is no tedious mixing and no settling out in the mixing tank. There are no blocked spray nozzles, which means no time wasted clearing blockages and most importantly, no missed strips in your spray pattern. Importantly there is no need to add any wetting agent.

Clearly Easier

DSMA CLEAR solution is easier to measure and pour than present suspension concentrates.

Clearly Better

DSMA CLEAR eliminates risk of inhaling powder or dust, which means a safer workplace for operators.

Clearly Simpler to Use

DSMA CLEAR is a no-mess easy to handle liquid. Water your turf the day before spraying to ensure the soil is moist. There is no need for special equipment. Simply measure, add water and spray. Remember – no need to add any wetting agent!

PACK SIZE:

Available in 20 litre containers
