Dazzle 8:1 Concentrate

Dazzle is a premium grade, highly concentrated paint, specially formulated for the requirements of professional sports clubs. It is a high pigment concentrate, giving maximum opacity and durability.

Which applicators?

Dazzle is formulated to be applied through the iGO or other compatible spray machines, or transfer wheel markers. Optimum effects through spray markers are achieved using flat fan nozzles.

Coverage:

For initial marking a dilution rate of 4:1 (water to paint) is recommended, dependant on grass condition and club preference to the finished line.

For over-marking up to 8:1 (water to paint) is recommended, at which ratio Dazzle will give a line of outstanding opacity, durability and depth of colour.

Cleaning:

After the marking operation, the machines should be flushed through thoroughly using clean water to avoid any build-up of paint in the spray machine system. The reservoir of transfer wheel marking machines, should be emptied of surplus paint, and the reservoir and wheels flushed with clean water, to prevent build-up of paint and possibility of paint flakes affecting the next operation.

Dazzle is also available in the colours shown
