GROWING SOLUTIONS

Direction for Use:

Apply as a spray application throughout the year to supplement a fertility program. Dilute with water at the specified rate listed in the application rate table, using the higher rate in situations where plant stress is elevated or a greater growth response is desired. Apply in sufficient water to achieve adequate plant coverage. Avoid mowing for 24 hours following an application.

Application Details:

Situation	Rate/100m ²	Rate/Ha	Water Volume	Comments
Turf	400mL - 800mL	40L - 80L	Minimum of 8L/100m ² (800L/Ha)	Plant growth promoters can be absorbed by roots and foliage. For best results apply as a soil drench at 2 – 4 week intervals.
Landscape and Ornamental Plants		50mL	10L	Apply as a foliar spray or soil drench.

Mixing:

Shake well before use as organic compounds can settle in drum. Fill spray vessel with half the required volume of water. Add required amount of Fertech Bio to the spray tank while agitating. Add remaining water to the spray tank. Continue agitating during application. Wash out spray tank, including nozzles, immediately after use.

Storage, handling & disposal:

Do not store below -5°C, as crystallisation may occur. Do not contaminate lakes, streams, dams or ponds by cleaning equipment or disposal of waste. Avoid contact with eyes and skin by wearing appropriate protective equipment, such as gloves, boots and safety goggles.

First aid:

In case of contact with eyes or skin, flush at once with large amounts of water. If irritation persists, seek medical attention. If swallowed, drink large amounts of water and induce vomiting. Seek medical attention.

Conditions of sale:
