

A premium blend of three unique surfactant molecules

A precise balance of three unique polymeric surfactants, **Hydrolink Profile** is designed to enhance the availability, retention and distribution of moisture in sand based profiles. With a combination of straight block co-polymer and reverse block co-polymer molecules along with a high surface tension component, Hydrolink Profile has been formulated specifically to get water into the profile and distribute and retain the moisture evenly. Independent field and laboratory trials have demonstrated that Profile's performance in the root zone transfers to real improvements in surface quality and performance. Designed, formulated and packed in Australia with Australian turf managers in mind.

Key Attributes of Hydrolink® Profile

-  Unique 3-way surfactant blend
-  Designed to for use in sand-based profiles
-  Enhance moisture retention and distribution
-  Optimises air : water ratios

Pack sizes:
20L, 200L, 1000L

Application details

Situation	Rate/100m ²	Rate/Ha	Comments
For use in the prevention of localised dry spot and to promote even soil	200mL	20L	Apply in a minimum of 400L/Ha of water. Repeat application on a monthly basis prior to and throughout periods of frequent irrigation and/or growth. For best results irrigate following application with 4-6mm of water to position the product correctly in the soil profile. Irrigate immediately after application when temperature exceeds 30°C.
