

CAUTION

Application Information

Rate Guide

Foliar application – 2-4 kg/ha,
0.5-1.0% solution
Fertigation – 0.1-0.2% solution
Frequency – Apply above rates every
7-10 days.

Compatibility

NutraFeed products are compatible with additional Chelated trace elements. DO NOT mix non-chelated micronutrients such as copper, zinc, iron and manganese sulphates. DO NOT apply Calcium Nitrate in the same stock solution as NutraFeed products as insoluble residues will form. Calcium nitrate should be applied separately. It is not recommended to mix NutraFeed with selective herbicides or copper fungicides. Always perform a jar test before using any new combination of products for the first time.

Foliar Application

Apply foliar sprays as evenly as possible to cover leaves and stems. It is best to apply foliar fertilisers in the morning or evening. DO NOT apply foliar fertilisers on dry leaves in hot weather.

Solubility

Highly soluble ingredients are used in the Nutrafeed range allowing for solubility of up to 25kg/100L to be achieved. The actual solubility rate will be determined by water quality and temperature. Perform a jar test of the dilution rate of the stock solution before adding to the stock tank.

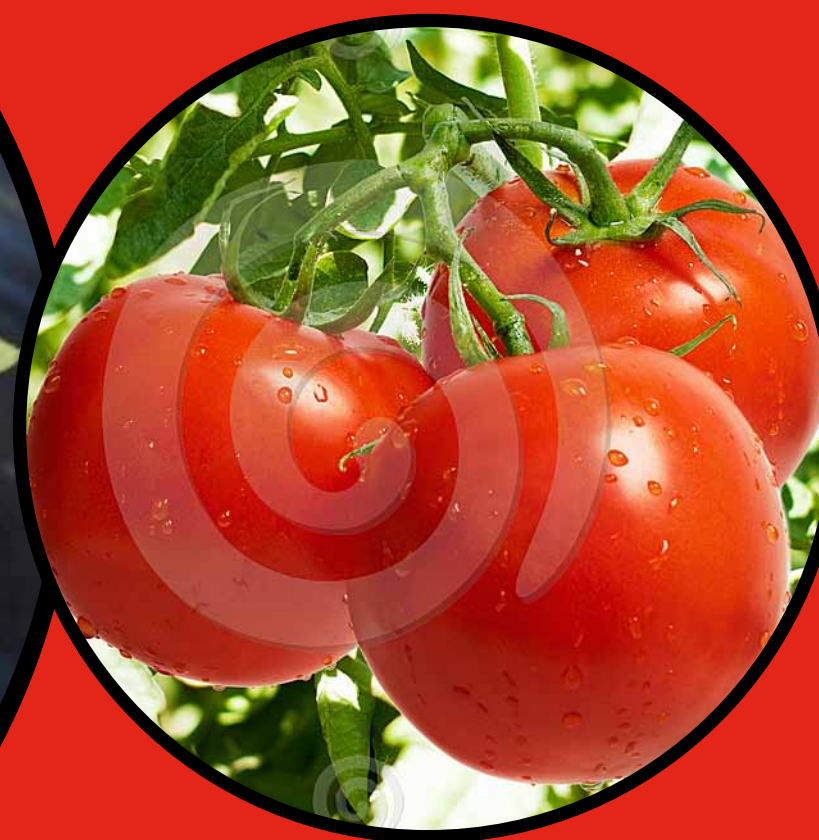

Important Information

- Always water fertiliser in well, immediately after application. Watering should involve a thorough saturation of the area.
- Avoid direct contact with plant roots, seeds etc.
- Even, light and regular applications of a quality product will achieve best results.
- Always reseal bags after use and dispose of empty bags properly.
- Sandy soils will require lower rates of fertiliser but more frequent applications
- Apply sparingly on potted plants as excessive fertiliser can cause burning relatively easily.
- It is much safer to apply small amounts on a regular basis.
- DO NOT exceed recommended application rates as this can be harmful to plants.
- DO NOT swallow. The dust from this product may act as an irritant. Avoid inhalation and contact with the eyes and skin.

NutraFeed
Fertiliser

NutraFeed products have been scientifically formulated for fertigation and foliar application. NutraFeed products contain premium quality ingredients in a variety of formulations for use in fertigation or foliar feeding.

NutraFeed Product Range

Product	N	P	K	S	TE
NutraFeed 4	19	2	17	8	Y
High analysis blend based on Potassium Nitrate suitable for a variety of plants.					
NutraFeed 7	10	3	33	1	Y
High potassium blend promoting fruit and flower development.					
NutraFeed 19	21	8	15	1	Y
Suitable for a wide range of crops including tree crops, vegetables, nurseries and turf.					
NutraFeed 20	24	-	24	1	Y
High Nitrogen and Potassium with zero phosphorus. Suitable for high P soils and Australian natives.					
NutraFeed 23	23	4	18	1	Y
Excellent soluble product for a wide range of applications.					
NutraFeed Kestrel	14	5	23	5	Y
Balanced formulation for fruiting or flowering plants.					

NutraFeed Custom Blending

NutraFeed products can be custom blended to a wide range of formulations to precisely meet the needs of the various crop growth stages.

NutraFeed Quality Soluble Fertilisers

NutraFeed solubles use quality ingredients sourced where possible from premium quality Haifa products. Products include trace elements in Chelated form. NutraFeed products are chloride free and contain less than 0.1% impurities.
