Granular	1.5kg -2kg									
Hydrolink Advance	200ml									
Kelpro	120ml									

Mowing
In the first two weeks, mowing your new lawn is not advised. This will give it the best chance to develop a root system. 1st mow - DO NOT cut more than 1/3 of the grass height. From then on, slowly decrease the height you're mowing at to achieve your desired height. EXPERT TIP: Always observe the 1/3 rule.

Fertilising
We recommend 2spec Establish to be laid under the turf (if not included by your Turf Supplier) . Kelpro and Hydrolink Advance are to be applied once the turf has been laid and watered in.

Watering your lawn
Weeks 1-2 Lots of little drinks 2-3 times per day. (more if it is over 28°C) Weeks 3-4 Check to see if the root system has been established. If it has, you can water 3-4 times per week. (more if it is over 28°C) Week 5 Watering to a regular schedule 2-3 times per week, https://www.lawnaddicts.com.au/resource/watering-your-lawn EXPERT TIP: During the first 2 weeks hang up a damp tea towel outside to monitor dampness.

Use of the area
Keep off the area for the first 2-3 weeks during Spring and Summer. During Autumn and Winter wait until the lawn is fully established.
