GROWING SOLUTIONS

Pack size 20kg, 25kg, 1 Tonne Bulka Bag

Guaranteed Minimum Analysis	
TOTAL POTASSIUM (K)	42%
TOTAL SULPHUR (S)	17%

A granular form of potassium sulphate, ideal for supplying the plant with potassium and sulphur in turf and other horticultural situations. Potassium plays an important role in plant growth being one of the essential macro nutrients and is responsible for providing strength to the plants cell walls. This element can also help defend the plant from disease by creating thicker cell walls making it harder for fungal spores to enter cells. Potassium also helps to move water and sugars through the Xylem and Phloem inside the plant.

Sulphur is also an essential plant nutrient involved in helping form important enzymes and assists in the formation of plant proteins. It is needed in very low amounts, but deficiencies can cause serious plant health problems and loss of vitality.

Sulphur is also beneficial in high pH soils as it can help to reduce pH over time with repeated applications.

Directions for use

Will vary according to soil testing but typically 1kg per 100m² watered in after application to avoid burning.
