

UMX

Liquid

ANALYSIS

12% (w/v) Humic Acid

3% (w/v) Fulvic Acid

4% (w/v) Potassium (K)

Contents: 20L

A high quality Humic/Fulvic formulation containing high levels of organic carbon. This product is very effective at preventing nutrient leaching from it's chelating/complexing abilities.

General Recommendation for Fertigation

Turf	Apply 10 – 20 Litres of UMX Liquid per hectare (100-200 ml/ 100m ²) in a balanced nutrient program with 1000L of water per hectare. Use the high rate on sandy profile soil types or at times of high nutritional demand. Apply as necessary or as part of a 2-6 week program. Rates will vary between planting surfaces due to soil type variation.
Ornamentals (Inc. Australian Natives)	Mix 1 Litre of UMX Liquid in 200 litres of water and drench around root zone at 4-6 week intervals.
