

lawnaddicts wintergreen

Wintergreen from Lawn Addicts is a highly concentrated liquid blend of proprietary pigments designed to enhance turf colour and appearance, and as a spray pattern indicator in turf, rights of way and non-agricultural areas. The unique blend of pigments within the Wintergreen formulation results in a truly natural looking deep green colour, ideal for enhancing turf appearance prior to tournaments or competitions, or during dormancy. Additionally, the heat absorbing properties of the Wintergreen pigment enhance photochemical activity within the turf canopy, stimulating plant growth and early break of winter dormancy.

› **Premium Formulation**

Wintergreen is a highly concentrated formulation of premium pigment components that have been specifically balanced to provide a truly natural looking, deep green colour.

Wintergreen has been developed and manufactured in Australia to suit local conditions and commonly used turf varieties.

As such the colour results achieved from Wintergreen are a perfect match for most turf varieties and turf management situations, Australia-wide.

› **Superior Turf Colour Results**

Application of Wintergreen to discoloured or dormant turf will result in immediate and prolonged colour enhancement. Following application the colour will last for several weeks dependent on weather conditions and maintenance activities.

In addition to Wintergreen's effect as a turf colourant, the unique pigment formulation also assists in increasing turf canopy temperatures to stimulate physiological activity in dormant turf.

This triggers plant growth and natural green-up as chlorophyll content increases with the initiation of photosynthesis, the result is a naturally greener and healthier plant.

› **Features of Lawn Addicts Wintergreen**

- ✓ Quality Australian Made product
- ✓ Highly concentrated formulation for excellent results at low use rates
- ✓ Natural looking dark green colour for superior turf appearance prior to tournaments and events
- ✓ Ideal for application during periods of poor turf colour such as during dormancy or following disease activity
- ✓ Non-toxic formulation – safe for the user and the environment when used as per the label
- ✓ Strong green colour ideal as a spray pattern indicator for improved application accuracy and efficiency
- ✓ Highly effective heat absorption properties ideal for optimising heat efficiency to stimulate plant growth in cooler weather – early spring green-up
